1 Executive Summary

This document outlines the deployment verification and audit reports' assessment by Nethermind Security for Mellow Flexible Vaults to Ethereum.

The verification reported in this document assesses compliance with the following key areas:

- Bytecode Verification: Section 3 provides comprehensive verification of deployed contract bytecode against the audited commit 72f689f965e4ac1a4c2bcfb645a8b5416cf740c7, ensuring all 37 contracts match their expected implementations.
- Factory Implementation Verification: Section 4 outlines the verification of factory contract implementations, confirming that correct implementation addresses were proposed and accepted for all 14 factory contracts.
- Ownership Verification: Section 5 details the verification of proxy admin ownership across all factory contracts, ensuring proper administrative control is established.
- Deployment Script Compliance: Section 6 provides verification that the deployed contracts were created using the correct deployment script parameters, including constructor arguments and external protocol addresses.

Verification Summary

| Verification Type | Total Contracts | Verification Status |
|------------------------------------|-----------------|---------------------|
| Bytecode Verification | 37 | All Passed |
| Implementation Verification | 14 | All Passed |
| Ownership Verification | 14 | All Passed |
| Constructor Parameter Verification | 37 | All Passed |

_

2 Scope

This report encompasses the verification of the following deployed contracts on Ethereum mainnet:

| Contract | Address |
|--------------------------------------|--|
| Factory Implementation | 0x0000000397b71C8f3182Fd40D247330D218fdC72 |
| Factory Factory | 0x0000000f9686896836C39cf721141922Ce42639f |
| Consensus Implementation | 0x0000000167598d2C78E2313fD5328E16bD9A0b13 |
| Consensus Factory | 0xaEEB06CBd91A18b51a2D30b61477eAeE3a9633C3 |
| DepositQueue Implementation | 0x00000006dA9f179BFE250Dd1c51cD2d3581930c8 |

Verification Objectives

The verification process aims to confirm that:

- All deployed contracts correspond to the actual contracts from the GitHub repository at the audited commit hash 72f689f.
- The deployed contracts were deployed using the provided deployment script: Deploy.s.sol
- All factory contracts have the correct implementation addresses proposed and accepted
- All factory contracts have proper ownership assigned to the proxy admin
- All constructor parameters match the expected values from the deployment script

Deployment Script Reference

- Deployment Script: scripts/ethereum/Deploy.s.sol
- Audited Commit: 72f689f965e4ac1a4c2bcfb645a8b5416cf740c7

3 Bytecode Verification

Description: The verification process involved comprehensive bytecode comparison between deployed contracts and the audited codebase at commit 72f689f965e4ac1a4c2bcfb645a8b5416cf740c7. This verification ensures that all 37 deployed contracts correspond exactly to the audited versions and were deployed using the correct deployment script parameters.

- Implementation Contracts: All 23 implementation contracts were verified to match their audited bytecode, confirming that the
 deployed code corresponds exactly to the audited commit.
- Factory Contracts: All 14 factory contracts were verified to have the correct implementation addresses proposed and accepted, ensuring proper proxy delegation to the audited implementations.
- Constructor Parameters: All constructor parameters were verified to match the deployment script specifications, including external
 protocol addresses and deployment configuration values.
- Deployment Script Compliance: The verification confirmed that all contracts were deployed using the provided deployment script with the correct parameters:
 - DEPLOYMENT_NAME: "Mellow"
 - DEPLOYMENT_VERSION: 1
 - External protocol addresses (Lido, EigenLayer, Symbiotic) match expected values

Verification Results

| Contract Type | Total Contracts | Verification Status |
|--------------------------|-----------------|---------------------|
| Implementation Contracts | 23 | All Passed |
| Factory Contracts | 14 | All Passed |
| Total Contracts Verified | 37 | All Passed |

Bytecode Verification Summary

4 Factory Implementation Verification

4.1 Implementation Proposal and Acceptance

All factory contracts were verified to have the correct implementation addresses proposed and accepted. This ensures that each factory contract delegates to the proper audited implementation when deploying new contract instances.

| Factory Contract | Expected Implementation | Verification Status |
|----------------------------|--|---------------------|
| Factory Factory | 0x0000000397b71C8f3182Fd40D247330D218fdC72 | Passed |
| Consensus Factory | 0x0000000167598d2C78E2313fD5328E16bD9A0b13 | Passed |
| DepositQueue Factory | 0x00000006dA9f179BFE250Dd1c51cD2d3581930c8 | Passed |
| FeeManager Factory | 0x0000000dE74e5D51651326E0A3e1ACA94bEAF6E1 | Passed |
| Oracle Factory | 0x0000000F0d3D1c31b72368366A4049C05E291D58 | Passed |
| RedeemQueue Factory | 0x0000000285805eac535DADdb9648F1E10DfdC411 | Passed |
| RiskManager Factory | 0x0000000714cf2851baC1AE2f41871862e9D216fD | Passed |
| ShareManager Factory | 0x0000000E8eb7173fA1a3ba60eCA325bcB6aaf378 | Passed |
| Subvault Factory | 0x0000000E535B4E063f8372933A55470e67910a66 | Passed |
| Verifier Factory | 0x000000047Fc878662006E78D5174FB4285637966 | Passed |
| Vault Factory | 0x0000000615B2771511dAa693aC07BE5622869E01 | Passed |
| EigenLayerVerifier Factory | 0x00000003F82051A8B2F020B79e94C3DC94E89B81 | Passed |
| ERC20Verifier Factory | 0x00000009207D366cBB8549837F8Ae4bf800Af2D6 | Passed |
| SymbioticVerifier Factory | 0x00000000cBC6f5d4348496FfA22Cf014b9DA394B | Passed |

Factory Implementation Verification Results

4.2 Implementation Storage Verification

The verification process confirmed that all factory contracts correctly store their implementation addresses in the ERC-1967 implementation slot (0x360894a13ba1a3210667c828492db98dca3e2076cc3735a920a3ca505d382bbc), ensuring proper proxy delegation to the audited implementations.

5 Ownership Verification

5.1 Proxy Admin Ownership

All factory contracts were verified to have proper ownership assigned to the proxy admin address 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0. This ensures that administrative control is properly established and the deployment script executed correctly.

| Factory Contract | Owner Address | Verification Status |
|----------------------------|--|---------------------|
| Factory Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| Consensus Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| DepositQueue Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| FeeManager Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| Oracle Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| RedeemQueue Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| RiskManager Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| ShareManager Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| Subvault Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| Verifier Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| Vault Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| EigenLayerVerifier Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| ERC20Verifier Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |
| SymbioticVerifier Factory | 0x81698f87C6482bF1ce9bFcfC0F103C4A0Adf0Af0 | Passed |

Ownership Verification Results

5.2 Ownership Transfer Verification

The verification confirmed that the deployment script correctly executed the ownership transfer process, ensuring that all factory contracts have their ownership properly assigned to the proxy admin address. This validates that the complete deployment script was executed successfully.

6 Deployment Script Compliance

6.1 Constructor Parameter Verification

All contracts were verified to have been deployed with the correct constructor parameters as specified in the deployment script. This includes verification of:

- Deployment Configuration: All contracts use the correct DEPLOYMENT_NAME ("Mellow") and DEPLOYMENT_VERSION (1) parameters.
- External Protocol Addresses: All contracts that interact with external protocols use the correct addresses:
 - WSTETH: 0x7f39C581F595B53c5cb19bD0b3f8dA6c935E2Ca0
 - WETH: 0xC02aaA39b223FE8D0A0e5C4F27eAD9083C756Cc2
 - EIGEN_LAYER_DELEGATION_MANAGER: 0x39053D51B77DC0d36036Fc1fCc8Cb819df8Ef37A
 - EIGEN_LAYER_STRATEGY_MANAGER: 0x858646372CC42E1A627fcE94aa7A7033e7CF075A
 - EIGEN_LAYER_REWARDS_COORDINATOR: 0x7750d328b314EfFa365A0402CcfD489B80B0adda
 - SYMBIOTIC_VAULT_FACTORY: 0xAEb6bdd95c502390db8f52c8909F703E9Af6a346
 - STAKER_REWARDS_FACTORY: 0xFEB871581C2ab2e1EEe6f7dDC7e6246cFa087A23
- Factory Dependencies: All contracts that depend on factory addresses use the correct factory addresses as specified in the deployment script.
- Hook Dependencies: All hook contracts use the correct dependency addresses as specified in the deployment script.

6.2 Deployment Script Execution Verification

The verification process confirmed that the deployment script was executed correctly by verifying:

- All factory contracts have their implementation addresses properly proposed and accepted
- All factory contracts have their ownership transferred to the proxy admin
- All constructor parameters match the expected values from the deployment script
- All external protocol addresses match the expected values from the deployment script

6.3 Deployment Script Reference

Deployment Script: scripts/ethereum/Deploy.s.sol

Audited Commit: 72f689f965e4ac1a4c2bcfb645a8b5416cf740c7

Deployment Parameters:

DEPLOYMENT_NAME: "Mellow"DEPLOYMENT_VERSION: 1

6.4 Verification Summary

The comprehensive verification process confirmed that all 37 deployed contracts correspond exactly to the audited codebase and were deployed using the correct deployment script with proper parameters. This ensures that the deployed contracts maintain the security guarantees established during the audit process.

| Verification Type | Total Contracts | Verification Status |
|------------------------------------|-----------------|---------------------|
| Bytecode Verification | 37 | All Passed |
| Implementation Verification | 14 | All Passed |
| Ownership Verification | 14 | All Passed |
| Constructor Parameter Verification | 37 | All Passed |

Comprehensive Verification Summary

7 About Nethermind

Nethermind is a Blockchain Research and Software Engineering company. Our work touches every part of the web3 ecosystem - from layer 1 and layer 2 engineering, cryptography research, and security to application-layer protocol development. We offer strategic support to our institutional and enterprise partners across the blockchain, digital assets, and DeFi sectors, guiding them through all stages of the research and development process, from initial concepts to successful implementation.

We offer security audits of projects built on EVM-compatible chains and Starknet. We are active builders of the Starknet ecosystem, delivering a node implementation, a block explorer, a Solidity-to-Cairo transpiler, and formal verification tooling. Nethermind also provides strategic support to our institutional and enterprise partners in blockchain, digital assets, and decentralized finance (DeFi). In the next paragraphs, we introduce the company in more detail.

Blockchain Security: At Nethermind, we believe security is vital to the health and longevity of the entire Web3 ecosystem. We provide security services related to Smart Contract Audits, Formal Verification, and Real-Time Monitoring. Our Security Team comprises blockchain security experts in each field, often collaborating to produce comprehensive and robust security solutions. The team has a strong academic background, can apply state-of-the-art techniques, and is experienced in analyzing cutting-edge Solidity and Cairo smart contracts, such as ArgentX and StarkGate (the bridge connecting Ethereum and StarkNet). Most team members hold a Ph.D. degree and actively participate in the research community, accounting for 240+ articles published and 1,450+ citations in Google Scholar. The security team adopts customer-oriented and interactive processes where clients are involved in all stages of the work.

Blockchain Core Development: Our core engineering team, consisting of over 20 developers, maintains, improves, and upgrades our flagship product - the Nethermind Ethereum Execution Client. The client has been successfully operating for several years, supporting both the Ethereum Mainnet and its testnets, and now accounts for nearly a quarter of all synced Mainnet nodes. Our unwavering commitment to Ethereum's growth and stability extends to sidechains and layer 2 solutions. Notably, we were the sole execution layer client to facilitate Gnosis Chain's Merge, transitioning from Aura to Proof of Stake (PoS), and we are actively developing a full-node client to bolster Starknet's decentralization efforts. Our core team equips partners with tools for seamless node set-up, using generated docker-compose scripts tailored to their chosen execution client and preferred configurations for various network types.

DevOps and Infrastructure Management: Our infrastructure team ensures our partners' systems operate securely, reliably, and efficiently. We provide infrastructure design, deployment, monitoring, maintenance, and troubleshooting support, allowing you to focus on your core business operations. Boasting extensive expertise in Blockchain as a Service, private blockchain implementations, and node management, our infrastructure and DevOps engineers are proficient with major cloud solution providers and can host applications inhouse or on clients' premises. Our global in-house SRE teams offer 24/7 monitoring and alerts for both infrastructure and application levels. We manage over 5,000 public and private validators and maintain nodes on major public blockchains such as Polygon, Gnosis, Solana, Cosmos, Near, Avalanche, Polkadot, Aptos, and StarkWare L2. Sedge is an open-source tool developed by our infrastructure experts, designed to simplify the complex process of setting up a proof-of-stake (PoS) network or chain validator. Sedge generates docker-compose scripts for the entire validator set-up based on the chosen client, making the process easier and quicker while following best practices to avoid downtime and being slashed.

Cryptography Research: At Nethermind, our Cryptography Research team is dedicated to continuous internal research while fostering close collaboration with external partners. The team has expertise across a wide range of domains, including cryptography protocols, consensus design, decentralized identity, verifiable credentials, Sybil resistance, oracles, and credentials, distributed validator technology (DVT), and Zero-knowledge proofs. This diverse skill set, combined with strong collaboration between our engineering teams, enables us to deliver cutting-edge solutions to our partners and clients.

Smart Contract Development & DeFi Research: Our smart contract development and DeFi research team comprises 40+ world-class engineers who collaborate closely with partners to identify needs and work on value-adding projects. The team specializes in Solidity and Cairo development, architecture design, and DeFi solutions, including DEXs, AMMs, structured products, derivatives, and money market protocols, as well as ERC20, 721, and 1155 token design. Our research and data analytics focuses on three key areas: technical due diligence, market research, and DeFi research. Utilizing a data-driven approach, we offer in-depth insights and outlooks on various industry themes.

Our suite of L2 tooling: Warp is Starknet's approach to EVM compatibility. It allows developers to take their Solidity smart contracts and transpile them to Cairo, Starknet's smart contract language. In the short time since its inception, the project has accomplished many achievements, including successfully transpiling Uniswap v3 onto Starknet using Warp.

- Voyager is a user-friendly Starknet block explorer that offers comprehensive insights into the Starknet network. With its intuitive interface and powerful features, Voyager allows users to easily search for and examine transactions, addresses, and contract details. As an essential tool for navigating the Starknet ecosystem, Voyager is the go-to solution for users seeking in-depth information and analysis;
- Horus is an open-source formal verification tool for StarkNet smart contracts. It simplifies the process of formally verifying Starknet smart contracts, allowing developers to express various assertions about the behavior of their code using a simple assertion language;
- Juno is a full-node client implementation for Starknet, drawing on the expertise gained from developing the Nethermind Client. Written in Golang and open-sourced from the outset, Juno verifies the validity of the data received from Starknet by comparing it to proofs retrieved from Ethereum, thus maintaining the integrity and security of the entire ecosystem.

General Advisory to Clients

As auditors, we recommend that any changes or updates made to the audited codebase undergo a re-audit or security review to address potential vulnerabilities or risks introduced by the modifications. By conducting a re-audit or security review of the modified codebase, you can significantly enhance the overall security of your system and reduce the likelihood of exploitation. However, we do not possess the authority or right to impose obligations or restrictions on our clients regarding codebase updates, modifications, or subsequent audits. Accordingly, the decision to seek a re-audit or security review lies solely with you.

Disclaimer

This report is based on the scope of materials and documentation provided by you to Nethermind in order that Nethermind could conduct the security review outlined in 1. Executive Summary and 2. Audited Files. The results set out in this report may not be complete nor inclusive of all vulnerabilities. Nethermind has provided the review and this report on an as-is, where-is, and as-available basis. You agree that your access and/or use, including but not limited to any associated services, products, protocols, platforms, content, and materials, will be at your sole risk. Blockchain technology remains under development and is subject to unknown risks and flaws. The review does not extend to the compiler layer, or any other areas beyond the programming language, or other programming aspects that could present security risks. This report does not indicate the endorsement of any particular project or team, nor quarantee its security.
